### DETAILED ACTION

Claims 1, 5, 6, 8-14, and 17 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest the use of analysis gas sensors *placed in an air outlet line of the oxygenator*, nor is it disclosed that an additional gas sensor is provided in the analysis gas delivery line. The closest prior art of record is Allers, which uses markers such as iodine to identify a perfusion leak. It would not have been obvious to supply a sensor at the oxygenator because sensing for iodine (or other indicators) upstream of the perfusion site would serve no benefit. Applicant specifically discloses the criticality of a sensor located in the air outlet of the oxygenator on pages 10-11 of the specification, as per claims 1 and 17. *By placing a sensor in the air outlet, it becomes possible to monitor the uptake of analysis gas by the artificial circulation. An increased gas uptake is noted after the system reaches equilibrium means that there is a leakage in the system.* Additionally, the prior art does not expressly teach or suggest the use of laughing gas as an analysis gas in a perfusion system. The use of laughing gas has the added benefit of being detectable in the patient's blood or exhaled breath.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phil Wiest whose telephone number is (571)272-3235. The examiner can normally be reached on 8:30am-5pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tatyana Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
